TinyCal

TinyCal is a menubar calendar with Google Calendar integration. It can show multiple months, use custom calendars, and show holidays and personal calendars.

Requirements

TinyCal requires Mac OS X 10.4 or later.

License

The basic version of TinyCal is free. You can use it as much as you like with no time limitations or obligations. Advanced functionality is available for \$10. The full version offers the following features:

- Personal Google Calendar integration
- Unlimited public Google Calendars
- Customized event colors

Google GData library used under Apache License, Version 2.0.
<http://www.apache.org/licenses/LICENSE-2.0>

Multiple Months

TinyCal can be customized to show 1, 2, 3 or 12 months at one time. The display can be arranged as tall or wide.

Google Calendar

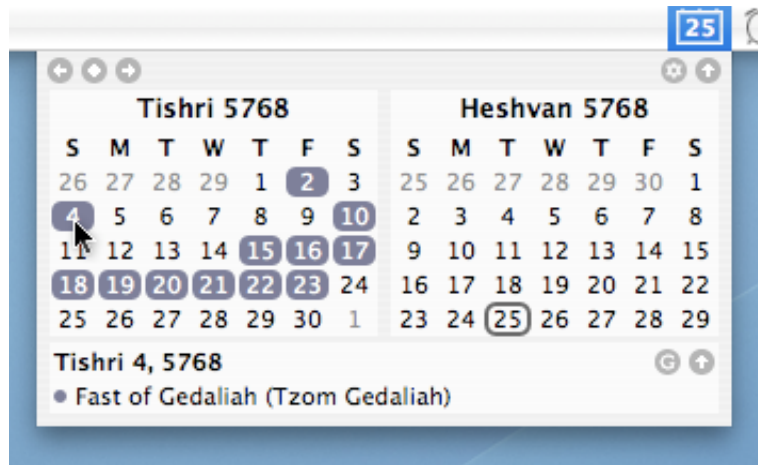

TinyCal can display public Google Calendars for holidays for 40 different countries, from Australia to Vietnam. It can also display events from your personal Google Calendar. The following screenshot shows holidays from the USA in blue and a personal calendar in red.

Google Calendar integration is provided via the Google GData libraries:
<http://code.google.com/apis/gdata>

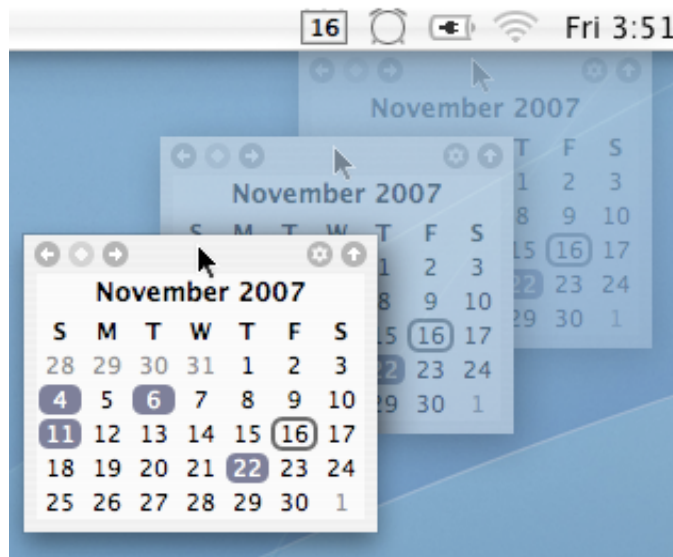

Custom Calendars

TinyCal can be customized to show other calendars, such as Buddhist, Hebrew, Islamic, and Japanese. The following screenshot show the Hebrew calendar with Jewish holidays.

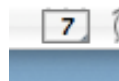

Tear-Away

The TinyCal window is a tear-away menu that can be repositioned anywhere on the screen.

Today's Events

In the TinyCal window, today's date is circled. In addition, if there are any events occurring today, they are reflected in the menubar icon. In the following screenshot, the blue triangle in the lower right indicates that there is an event today.

Controls

The basic controls are illustrated in the screenshot below.

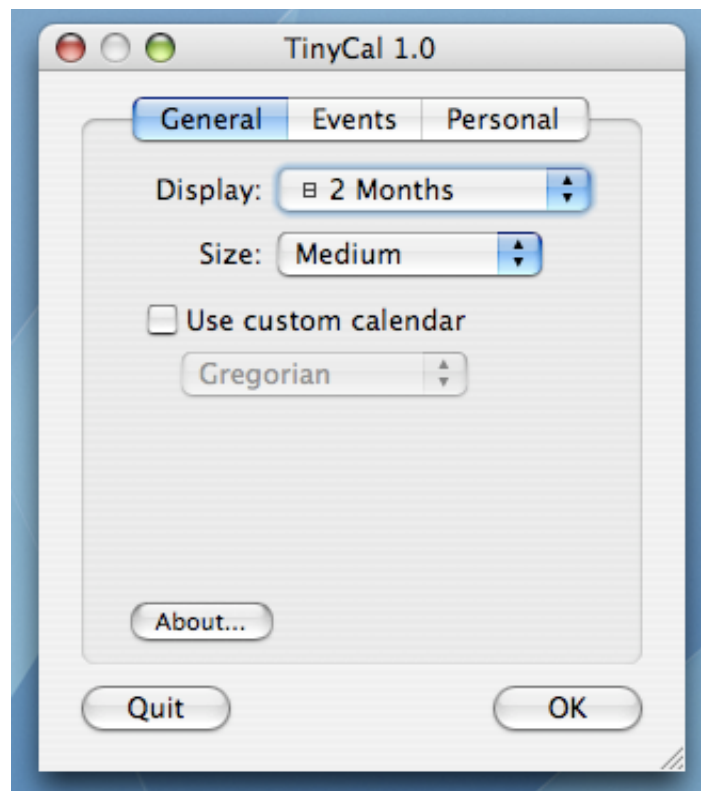

Close window	Close the TinyCal window.
Prefs	Display the preferences panel.
Reload	Reload events from Google personal calendars. Only available when there are enabled personal calendars.
Next month	Move to the next month
Today/Snapback	Move to the current month, if you have moved to a different month. Snapback to prior month if you are on the current month.
Previous month	Move to the previous month.
Google calendar	Go to Google Calendar. Only available when there are enabled personal calendars.
Close day detail	Close the day detail display (the lower pane).

General Prefs

In the **General** preferences pane, you can change the number of months displayed in the **Display** menu. You can choose from 1, 2, 3, or 12 months, in a tall or wide configuration.

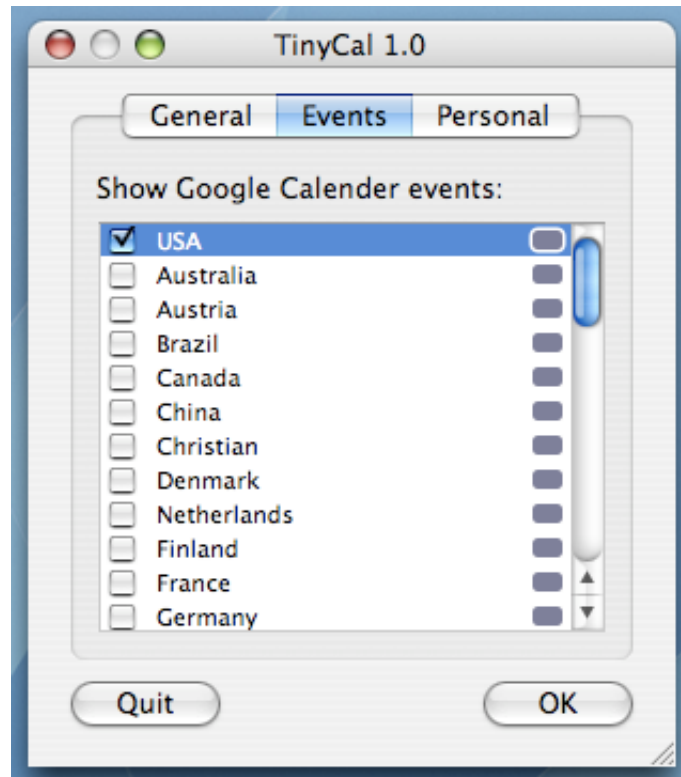

Using the **Size** menu, the display size can be set to small, medium, or large.

To pick a calendar different from the Mac OS X International preference setting, use the **Custom Calendar** menu

Events Prefs

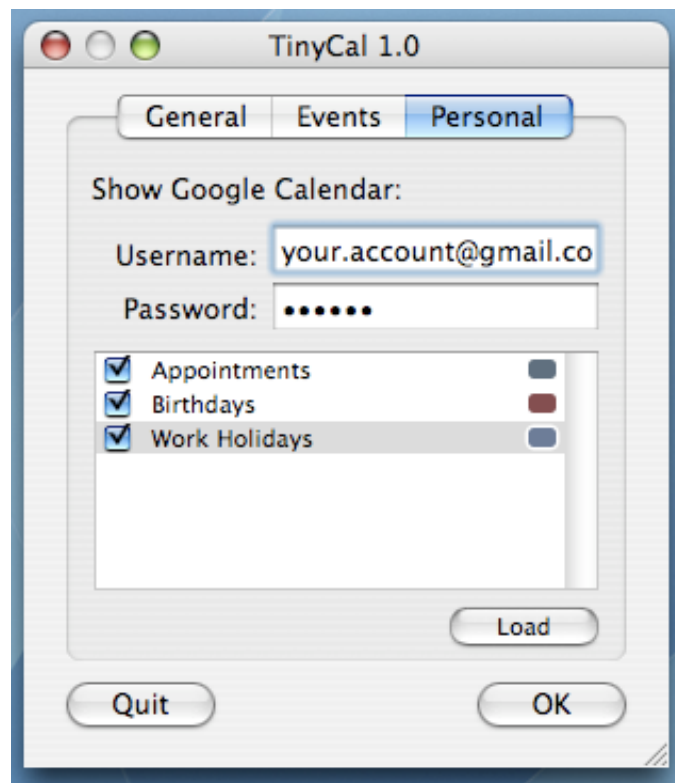

In the **Events** preferences pane, you can choose which Google Calendar events you'd like to display. To change the color of the events, click the bubble on the right.

In the free version, you can only use one event calendar at a time, and you can not change event colors.

Personal Calendar Prefs

In the **Personal** preferences pane, you can configure your personal Google Calendar settings. Enter your google.com username and password in the appropriate text boxes. To load or reload your calendars, use the **Load** button.

Personal calendars are not enabled in the free version.
